IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re application of:

Pantoliano *et al.*

Appl. No. 10/057,940

Filed: January 29, 2002

For: **High Throughput Method For
Functionally Classifying
Proteins Identified Using a
Genomics Approach**

Confirmation No. 4865

Art Unit: 1627

Examiner: *To be assigned*

Atty. Docket: 1503.0310002/JAG/JSO

First Supplemental Information Disclosure Statement

Commissioner for Patents
Washington, D.C. 20231

Sir:

Listed on accompanying Form PTO-1449 are documents that may be considered material to the examination of this application, in compliance with the duty of disclosure requirements of 37 C.F.R. §§ 1.56, 1.97 and 1.98. The numbering on this First Supplemental Information Disclosure Statement is a continuation of the numbering in Applicants' Information Disclosure Statement filed herewith in connection with the above-captioned application. A copy of each document is also provided.

The Examiner's attention is also directed to co-pending U.S. Patent Application Nos. 09/438,357, filed November 12, 1999 and 09/801,676, filed March 9, 2001. Pursuant to 37 C.F.R. § 1.98(a)(2), legible copies of these applications and the current claims are provided herein. The identification of these U.S. Patent Applications is not to be construed as a waiver of secrecy as to those applications now or upon issuance of the present application as a patent. The Examiner is respectfully requested to consider the cited applications and the art cited therein during examination.

Documents AT14, AR20, AT22, AT23, AR24, AS24, AS29, AT29, AR35, AS39, AT39, AR40, AT40 and AS41 are in a foreign language. An English language translation of document AT23 is provided as document AR46. A partial English language translation of document AR20 is provided as document AT45. A partial English language translation of document AR24 is provided as document AS46. A partial English language translation of document AS24 is provided as document AT46. An English language summary is found on the last page of documents AT14, AS29, AT29, AR35, AS39, AT39, AR40, and AS41.

It is believed that document AT22 discusses the structure and biological activities of complement receptors CR1, CR2, and CR3, and mentions ligand for binding to these receptors.

It is believed that document AT40 purports that binding by cyclophilin and by FK-506-binding protein results in a conformational change in each protein.

Where the publication date of a listed document does not provide a month of publication, the year of publication of the listed document is sufficiently earlier than the effective U.S. filing date and any foreign priority date so that the month of publication is not in issue. Applicants have listed publication dates on the attached PTO-1449 based on information presently available to the undersigned. However, the listed publication dates should not be construed as an admission that the information was actually published on the date indicated.

Applicants reserve the right to establish the patentability of the claimed invention over any of the information provided herewith, and/or to prove that this information may not be prior art, and/or to prove that this information may not be enabling for the teachings purportedly offered. This statement should not be construed as a representation that a search

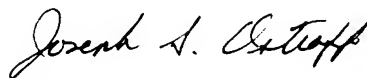

has been made, or that information more material to the examination of the present patent application does not exist.

This First Supplemental Information Disclosure Statement is being filed before the mailing date of a first Office Action on the merits. No statement or fee is required.

Consideration of the cited documents and making the same of record in the prosecution of the above-identified application is respectfully requested. The U.S. Patent and Trademark Office is hereby authorized to charge any fee deficiency, or credit any overpayment, to our Deposit Account No. 19-0036.

Respectfully submitted.

STERNE, KESSLER, GOLDSTEIN & FOX P.L.L.C.
